

Security for the Financial Industry

HOW WATCHGUARD PROTECTS FINANCIAL DATA

- STAYS UP-TO-DATE WITH SOX, PCI DSS, SEC REQUIREMENTS, GLBA, AND OTHER STANDARDS
- HELPS DEFINE, IDENTIFY, AND PROTECT SENSITIVE DATA
- DELIVERS COMPLIANCE REPORTING, MONITORING, AND CENTRALIZED MANAGEMENT
- SECURES REMOTE CONNECTIVITY
- DEPLOYS LAYERED SECURITY FOR BROADEST RANGE OF NETWORK THREAT COVERAGE

STEP UP TO BEST-IN-CLASS NETWORK SECURITY AND COMPLY WITH GLBA AND PCI DSS

Financial services organizations of all sizes are under attack from cybercriminals and insiders, while also subject to an increasing array of data governance regulations and auditing requirements. The need for a cost-effective, defense-in-depth network security solution that is easy-to-manage should top the wish lists for network security administrations.

According to Verizon's 2012 Data Breach Investigations Report, 97% of data breaches were preventable through simple or intermediate controls. The same report found that 96% of cybercrime victims subject to PCI DSS had not achieved compliance.¹

By being smart about security, such as by taking a multilayered approach and implementing strong policy controls, financial organizations can significantly bolster their network defenses and reduce their security risk from employee mistakes and hackers.

AWARD-WINNING, DEFENSE-IN-DEPTH NETWORK PROTECTION FOR YOUR BUSINESS

WatchGuard enables you to protect your network from each unique and evolving security challenge while also helping your organization comply with the increasing number of industry regulations. WatchGuard's award-winning, next-generation physical and virtual security appliances provide the industry's premier multilayered protection, while enabling the advanced networking, strong performance, and powerful management tools that businesses today need to compete.

BEST-IN-CLASS BY DESIGN

WatchGuard products are engineered to seamlessly integrate best-in-class solutions from technology luminaries, including AVG, Commtouch, Websense, BroadWeb, and Kaspersky.

By consolidating robust access controls, web URL filtering, intrusion prevention, anti-malware, zero-day protection, application-aware firewalling, and other vital security features into one powerful device, WatchGuard is able to deliver security that is stronger at each defense layer, easier to manage, and at a better value than competitors.

WatchGuard XTM financial service solutions protect sensitive customer data from compromise in a layered fashion, delivering broad protection that is more cost effective and far simpler to manage than deploying and administering multiple, single-point products.

EMAIL ENCRYPTION AND DATA LOSS PREVENTION FOR FINANCIAL SERVICES

Email encryption and data loss prevention (DLP) are increasingly becoming “must have” technologies for financial services companies. Regulations such as PCI DSS and Gramm-Leach-Bliley Act (GLBA) mandate that email messages containing confidential data are handled securely.

WatchGuard’s email encryption safeguards your sensitive messages from the prying eyes of unauthorized individuals—even if it is intercepted! WatchGuard ensures millions of encrypted messages containing financial data, personal ID numbers, and other sensitive data are securely delivered to the intended recipient. WatchGuard DLP intelligently analyzes both context (who is sending information, and who is receiving it) and content (what the information is) to ensure that sensitive data is not accidentally or maliciously leaked out of your organization.

STAY CONNECTED AND PROTECTED FROM ANYWHERE

Select from a range of WatchGuard solutions (VPN, Wi-Fi, etc.) to encrypt and protect communications for your headquarters, branch offices, and mobile workers.

POLICY MANAGEMENT & COMPLIANCE REPORTING IN JUST A FEW CLICKS

WatchGuard’s rich, real-time monitoring, logging, and reporting features help you identify threats, improve security, and provide documentation to support regulatory audits, such as GLBA, SOX, and PCI DSS.

According to the Ponemon Institute, non-compliance costs are 2.65 times higher for organizations than compliance costs.² Companies with ongoing investments in compliance-related activities save money compared to organizations that fail to comply with government and industry mandates.

WatchGuard solutions enable you to:

- Set uniform security policies with the click of a mouse
- Validate that security policies are working (i.e. monitor log files)
- Use interactive, real-time monitoring to take instant preventive or corrective action
- Perform in-depth analysis of network activity, security threats, and user behaviors through full-featured reporting
- Access PCI compliance reports with one click

UNRIVALLED CENTRALIZED MANAGEMENT

A WatchGuard firewall lets you manage all of the feature sets through the same interface. This simplifies the administration process and is just one of many ways WatchGuard helps you reduce errors, save time, streamline operations, and simplify the learning curve for you and your staff.

The WatchGuard System Manager (WSM) includes powerful tools for managing one appliance, or hundreds, from a single console, as well as timesaving features such as drag-and-drop VPN tunnel creation. All of this is included at no extra cost with your WatchGuard solution.
