

WatchGuard[®] SSL 100 and SSL 560

FOR ANYWHERE, ANYTIME SECURE REMOTE ACCESS

RECOMMENDED FOR BUSINESSES WITH UP TO 500 CONCURRENT REMOTE USERS

The WatchGuard SSL 100 and SSL 560 are affordable, easy-to-use secure remote access appliances that provide reliable connectivity to corporate data and resources for anywhere, anytime productivity.

Flexibility, ease of use and affordability make the WatchGuard SSL appliance the perfect choice for any business with secure remote connectivity demands. Whether your deployment requirements are simple or sophisticated, the WatchGuard SSL line of appliances will meet your needs without busting your IT budget.

Businesses looking for extreme ease of use will appreciate the simple device configuration, allowing admins to “set and forget” remote access to standard network resources. And for end users, remote access to favorite resources is a breeze.

Businesses with more complex needs can choose to use a mix of both tunnel and portal-based resources, provide the helpdesk direct access to a remote user’s desktop via bi-directional tunneling, and control network access based on granular user/device criteria – standard features on all WatchGuard SSL appliances.

“With WatchGuard SSL devices, we **don’t have to install and update** a specific piece of software, and users **automatically download the latest policies** when they authenticate. It **couldn’t be easier!**”

*Brandon Zumwalt
President
Internet Contrasts*

INCREASED PRODUCTIVITY

- Remote employees have simple access to essential corporate resources including email, SharePoint, web conferencing and CRM from any web-enabled device. Additionally, non-native applications such as SSH and RDP can be delivered through a user’s web browser, further increasing remote accessibility.
- Time-to-value is determined in minutes. Basic configuration enables an end user to simply double-click an icon to authenticate, automatically loading the access client and establishing an SSL tunnel for complete access to the backend network.
- Bi-directional tunneling allows your helpdesk to connect to a remote employee’s device and troubleshoot technical problems or update software. And, unlike products from other vendors, both the WatchGuard SSL 100 and SSL 560 include this functionality at no extra charge, further helping to keep your TCO low.

EASE OF USE

- Secure single sign-on allows users to log on once and access anything in the portal – eliminating frustrating and time wasting re-authentication at every step.
- Helpful configuration wizards and auto-populated default settings make installing the all-in-one appliance easy, right out of the box. With no thick client to manage and no other software components to buy, you can “set it and forget it.”
- Consolidated auditing collects all information about identity, access, and system events in a central repository for quick insight into user and system-based activities.

GREATER SECURITY

- Comprehensive endpoint integrity-checking ensures network protection by allowing organizations to tie user access to endpoint compliance, including checks for anti-virus, anti-spyware, firewall software, and many other device attributes.
- Appliance-based firewall capabilities allow for granular access rules to be defined on a per-resource basis, offering an additional level of network access security.
- Session clean up removes all traces of access from the endpoint, including cache cleaning, history removal, file deletion and more, to protect against unintended data leakage and unauthorized access.
- Support for 16 local and third-party authentication methods, including true two-factor SMS and web keypad authentication, Active Directory, and onboard LDAP, ensures only authorized users have access.

FLEXIBILITY

- Client-based access (32-bit and 64-bit Windows 8, Windows 7, XP and Vista devices) and client-less web access ensure easy remote connections to network resources from a broad array of devices and systems.
- Wide-ranging capabilities – endpoint integrity checking, web applications, tunnel access to network resources, and bi-directional tunneling for helpdesk and desktop application delivery – allow WatchGuard SSL appliances to address your business’s changing needs.
- Generous user packs allow for easy accommodation of organizational growth, ensuring the WatchGuard SSL appliance is always sized correctly for your environment – saving precious IT dollars.
- Application portal customization gives administrators the ability to re-brand the SSL VPN portal with custom text and images, creating a more unified client experience and consistent company messaging.
- Audit trail and log data can be shown in multiple graphical formats for current and historical reporting, and exported to third-party utilities, such as Excel or Crystal Reports, for further data mining and asset management.

Expert Guidance and Support

LiveSecurity® Service from WatchGuard is the most comprehensive support and maintenance offering in the industry, putting a global team of security experts behind you to make the complex job of IT security management easier. LiveSecurity provides:

- Hardware warranty with advance hardware replacement
- Software updates
- Technical support
- Up-to-the-minute security alerts with links to patches to save time

One-year, two-year, and three-year LiveSecurity subscriptions are available, including subscriptions to LiveSecurity Plus for 24/7 technical support. A premium Gold service is also available for customers with mission-critical Internet requirements who require a one-hour response time.

For more information on WatchGuard SSL appliances, contact your authorized WatchGuard reseller, visit www.watchguard.com/ssl, or contact WatchGuard directly at the numbers below.

*Terminal-based IT administrators typically calculate 1 remote user for every 5 users in the organization; therefore, the SSL 100 is tuned for organizations with 1 to 500 users and the SSL 560 is tuned for organizations with 1 to 2,500 users.
